

Report on
World Environment Day
Conducted By

Since 2003

KARUPA FOUNDATION

Date: 09th April 2023

In recognition of World Environment Day, the Karupa Foundation and KAHE in Coimbatore organised an online meeting and a tree plantation on 5th June 2023. Every year on June 5, a global celebration is called World Environment Day to promote environmental protection. The UN General Assembly developed it in 1972 to coincide with the start of the Stockholm Conference on the Human Environment.

Objective

The primary objective of World Environment Day is to raise awareness and inspire people to take action for the environment by encouraging them to do so. Every year, a new subject highlights a particular environmental problem or difficulty. The topics were chosen to relate to current issues and inspire action towards sustainable living.

Theme for 2023

The campaign **Beat Plastic Pollution** served as a stimulus for the 2023 World Environment Day topic, primarily focused on ways to reduce plastic pollution. Plastic is rapidly taking over the planet. Every year, more than 400 million tonnes of plastic are produced, half intended for single-use purposes.

Significance of World Environment Day

Around the world, there are numerous ways to celebrate World Environment Day. Events that support environmental sustainability include tree planting, cleanup efforts, awareness campaigns, conferences, seminars, exhibitions, and other occasions. Governments, corporations, and individuals have the chance to highlight their environmental commitments and activities.

Conclusion

Everybody is responsible for preserving and maintaining the environment, as they return home by World Environment Day. It highlights the importance of teamwork, inspires people and groups to make sustainable decisions in their day-to-day lives, and pushes for more extensive environmental protection.
